

In the Claims:

Please add new Claims 9-20 as indicated below. The status of all claims is as

follows:

1. (Previously Presented) A trimmer attachment for a hair clipper, the hair clipper having a stationary blade and a reciprocating blade, the attachment comprising:
means for securing the attachment to the hair clipper; and
a movable trimmer blade that reciprocates in response to reciprocation of the reciprocating blade of the hair clipper.

2. (Original) The trimmer attachment of claim 1, comprising:
a drive arm at least partially surrounding the reciprocating blades of the hair clipper, and
a blade guide operatively connected to the drive arm and also secured to the movable trimmer blade.

3. (Original) The trimmer attachment of claim 2, comprising:
a stationary trimmer blade that complements the movable trimmer blade, the movable trimmer blade reciprocating across the stationary trimmer blade to cut hair.

4. (Previously Presented) The trimmer attachment of claim 3, comprising:

a base, the stationary trimmer blade being secured in the base,
a spring secured to the base over the blade guide, and
a guide secured to the base over the drive arm, to hold the drive arm in place.

5. (Original) The trimmer attachment of claim 4 wherein the guide also
secures the attachment to the hair clipper.

6. (Original) The trimmer attachment of claim 4 wherein the base
covers the stationary blade of the hair clipper to avoid unintentional cutting by the hair
clipper when the trimmer attachment is secured to the hair clipper.

7. (Original) The trimmer attachment of claim 1 wherein hair clipper
blades have a first width and the movable trimmer blade has a second width narrower than
the first width.

8. (Original) The trimmer attachment of claim 4 wherein the base has
two sides that secure the attachment laterally.

9. (New) A trimmer attachment for a hair clipper, the hair clipper having a
stationary blade and a reciprocating blade, the attachment comprising:

means for removably securing the attachment to the hair clipper; and

a movable trimmer blade that reciprocates in response to reciprocation of the reciprocating blade of the hair clipper.

10. (New) The trimmer attachment of claim 9, comprising:

a drive arm at least partially surrounding the reciprocating blades of the hair clipper, and

a blade guide operatively connected to the drive arm and also secured to the movable trimmer blade.

11. (New) The trimmer attachment of claim 10, comprising:

a stationary trimmer blade that complements the movable trimmer blade, the movable trimmer blade reciprocating across the stationary trimmer blade to cut hair.

12. (New) The trimmer attachment of claim 11, comprising:

a base, the stationary trimmer blade being secured in the base,

a spring secured to the base over the blade guide, and

a guide secured to the base over the drive arm, to hold the drive arm in place.

13. (New) The trimmer attachment of claim 12 wherein the guide also secures the attachment to the hair clipper.

14. (New) The trimmer attachment of claim 12 wherein the base covers the stationary blade of the hair clipper to avoid unintentional cutting by the hair clipper when the trimmer attachment is secured to the hair clipper.

15. (New) A trimmer attachment for a hair clipper, the hair clipper having a stationary blade and a reciprocating blade, the attachment comprising:

means for securing the attachment to the hair clipper; and

a movable trimmer blade that is driven, in a reciprocating manner, by reciprocation of the reciprocating blade of the hair clipper.

16. (New) The trimmer attachment of claim 15, comprising:

a drive arm at least partially surrounding the reciprocating blades of the hair clipper, and

a blade guide operatively connected to the drive arm and also secured to the movable trimmer blade.

17. (New) The trimmer attachment of claim 16, comprising:

a stationary trimmer blade that complements the movable trimmer blade, the movable trimmer blade reciprocating across the stationary trimmer blade to cut hair.

18. (New) The trimmer attachment of claim 17, comprising:
a base, the stationary trimmer blade being secured in the base,
a spring secured to the base over the blade guide, and
a guide secured to the base over the drive arm, to hold the drive arm in place.

19. (New) The trimmer attachment of claim 18 wherein the guide also
secures the attachment to the hair clipper.

20. (New) The trimmer attachment of claim 18 wherein the base covers the
stationary blade of the hair clipper to avoid unintentional cutting by the hair clipper when the
trimmer attachment is secured to the hair clipper.
